This Volume

FOREWORD

The data collection programs of the Department of Water Resources have been designed to supplement the activities of other agencies to satisfy specific needs of the State. Bulletin No. 130-66 presents useful, comprehensive, accurate, and timely hydrologic data which are prerequisites for effective planning, design, construction, and operation of water facilities.

The Bulletin No. 130 series is published annually in five volumes. Each volume presents hydrologic data for one of five reporting areas of the State. These areas are delineated on the map to the left.

William R. Gianelli

William R. Gianelli, Director
Department of Water Resources

ACKNOWLEDGMENTS

In the preparation of this report, valuable assistance and contributions were received from many public and private agencies. Special mention is made of the following agencies whose cooperation is gratefully acknowledged.

City of Long Beach Water Department
City of Los Angeles Department of Water and Power
City of San Diego Water Department
Coachella Valley County Water District
Imperial Irrigation District
Los Angeles County Flood Control District
Orange County Flood Control District
Riverside County Flood Control and Water Conservation District
San Bernardino County Flood Control District
San Bernardino Valley Water Conservation District
San Luis Obispo County Flood Control and Water Conservation District
The Metropolitan Water District of Southern California
United States Army Corps of Engineers
United States Geological Survey
United States Weather Bureau
Ventura County Flood Control District

ABSTRACT

This report contains data on precipitation, surface water flow, reservoir storage, ground water levels, and ground water recharge activities in Southern California during the 1965-66 water year. Figures show location of hydrologic areas within the drainage provinces, representative precipitation characteristics, imported water, and fluctuation of water level in wells.

Appendix A

CLIMATOLOGICAL DATA

INTRODUCTION

This appendix summarizes monthly precipitation data for Southern California from July 1, 1965, through September 30, 1966 (Table A-2). Cooperators and cooperating agencies supplied data from 820 stations and the U. S. Weather Bureau supplied data from 193 stations. These stations are listed in the Index (Table A-1). Detailed daily and hourly data for some stations not published here are available in the files of the Department of Water Resources, Southern District. Representative precipitation characteristics for four stations are shown in Figures A-7 through A-10.

To ensure accuracy, stations are inspected semiannually by the U. S. Weather Bureau to see that the equipment is properly maintained and that observations generally are taken in accordance with their standards.

Each station in this appendix has been assigned an identification number. The first character denotes the drainage province. The second and third characters represent the hydrologic unit. (Figures A-1 through A-6 show the locations and code numbers of the hydrologic subdivision in each drainage province.) The remaining characters denote the alphabetical sequence of the station.

TABLE A–I INDEX OF CLIMATOLOGICAL STATIONS

An explanation of the column headings and the code symbols follows:

40-Acre Tract – This denotes the location of the station within the section in which it is located. The letter code is derived from the diagram to the right.

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Base and Meridian – The code for this column is as follows:

M – Mount Diablo Base and Meridian, or
S – San Bernardino Base and Meridian

Cooperator Number – This number is assigned from the following list:

000	Private Cooperators
004	Southern California Edison Company
011	Southern Pacific Company
014	California-American Water Company
016	Temescal Water Company
017	Gage Canal Company
018	Corona Foothill Mutual Lemon Company
405	City of Los Angeles, Department of Water and Power
406	City of San Diego
410	Los Angeles County Flood Control District
411	Marin County Engineer
415	Orange County Flood Control District
416	Ventura County Flood Control District
417	The Metropolitan Water District of Southern California
428	San Diego County
429	San Bernardino County Flood Control District
430	San Luis Obispo County Flood Control and Water Conservation District
431	Riverside County Flood Control and Water Conservation District
432	Vista Irrigation District
433	Helix Irrigation District
435	Montecito County Water District
436	City of San Bernardino Water Department
808	State Division of Forestry
813	State Department of Water Resources
900	United States Weather Bureau (Published records)
906	Agriculture Research Service
907	United States Weather Bureau, State Climatologist, (Unpublished records)
913	United States Army Corps of Engineers, Los Angeles District
914	United States Marine Corps, Camp Pendleton
915	United States Weather Bureau, Washington, D. C , (Unpublished records)
916	United States Geological Survey

Cooperator's Index Number – This is the number assigned to the station by the agency responsible for, or handling the records of the station. The U.S. Weather Bureau number is only shown in this column when it differs from the alpha order number.

County – This is a standard code for California counties and adjacent areas as shown below:

Imperial	13	Monterey	27	San Diego	90
Inyo	14	Orange	30	San Luis Obispo	40
Kern	15	Riverside	33	Santa Barbara	42
Los Angeles	70	San Bernardino	36	Ventura	56
Mono	26

Appendix B

SURFACE WATER MEASUREMENTS

INTRODUCTION

This appendix presents surface water data for Southern California from October 1, 1965, through September 30, 1966. These data consist of summary tables of annual unimpaired runoff from major streams (Table B-1), daily mean discharge (Table B-2), diversions from the Colorado River (Figure B-1), imported water (Figure B-2), and monthly water content of major reservoirs (Table B-3).

Each station in this appendix has been assigned an identification number.

TABLE B-1 ANNUAL UNIMPAIRED RUNOFF AT SELECTED STATIONS

Unimpaired runoff is defined as the flow that occurs naturally at a point in a stream if there were: (1) no upstream controls such as dams or reservoirs; (2) no artificial diversions or accretions; and, (3) no change in ground water storage resulting from development. The computed natural, or unimpaired, runoff values are considered to be the flows that would occur if no impairments were upstream from the measurement points.

TABLE B – 1

ANNUAL UNIMPAIRED RUNOFF AT SELECTED STATIONS

In percent of average

Water Year	Owens R. below Long Valley	Big Rock Cr. near Valyermo	Sespe Cr. near Fillmore**	Arroyo Seco near Pasadena	Santa Ana R. near Mentone	Murrieta Cr. at Temecula	Arroyo Grande at Arroyo Grande

Average unimpaired runoff in acre-feet computed from the 50–year period October 1915 through September 1965

** Data prior to October 1927 from D.W.R. Bulletin No. 1. Listed as "Sespe Creek near Sespe."

TABLE B-2

DAILY MEAN DISCHARGE

The discharge figures in this table have been rounded off as follows:

1. Daily flows - second-feet

0.0	- 9.9	nearest	Tenth
10	- 999	"	Unit
1,000	- 9,999	"	Ten
10,000	- 99,999	"	Hundred
100,000	- 999,999	"	Thousand

2. Monthly means - second-feet

0.0	- 99.9	nearest	Tenth
100	- 9,999	"	Unit
10,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred

3. Yearly totals - acre-feet

0.0	- 9,999	nearest	Unit
1,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred
1,000,000	- 9,999,999	"	Thousand

Appendix C

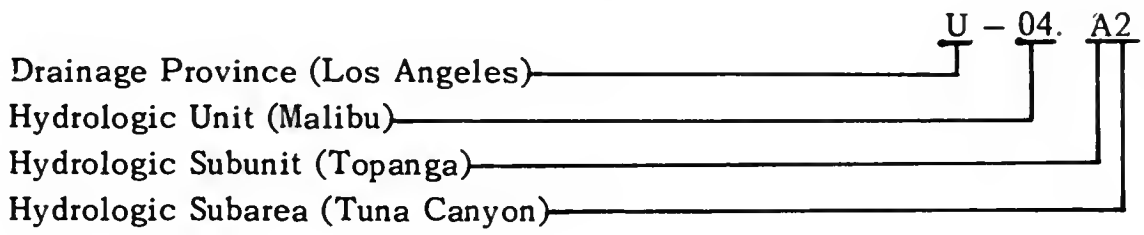
GROUND WATER MEASUREMENTS

INTRODUCTION

This appendix contains ground water level measurements (Table C–1) for approximately 8,000 wells for the period July 1, 1965, through September 30, 1966. It also contains hydrographs of selected wells (Figure C–1) and a tabulation of ground water replenishment (Table C–2).

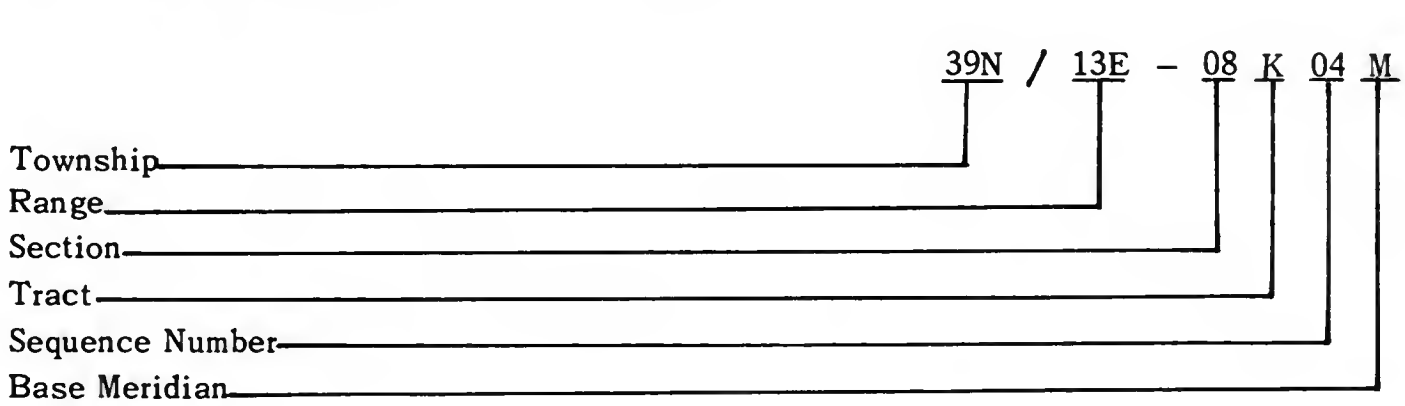
Two numbering systems are used by the Department to facilitate processing of water level measurement data. The two systems are the *Areal Designation* and the *State Well Numbering System* as described below.

The *Areal Designation System* comprises a series of major drainage provinces which are further subdivided into hydrologic units, hydrologic subunits, and hydrologic subareas. A coding system of the form *U–04.A2* has been developed as follows:



Figures A–1 through A–6 (in Appendix A) show the location and code number of each hydrologic subdivision in each drainage province.

The *State Well Numbering System* is based on township, range, and section subdivisions of the Public Land Survey. The number of a well, assigned in accordance with this system, is referred to as the *State Well Number,* as illustrated below:



This number identifies and locates the well. In the example, the well is in Township 39 North, Range 13 East, Tract K of Section 8, located in the Mount Diablo Base and Meridian. A section is divided into 40–acre tracts as shown:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Sequence numbers in a tract are generally assigned in chronological order. The example designates the fourth well to be assigned a number in Tract K.

FLUCTUATION OF WATER LEVEL IN WELLS

TABLE C – 1 GROUND WATER LEVELS AT WELLS

An explanation of the column headings and the code symbols follows:

State Well Number – Refer to the explanation under "Introduction."

Ground Surface Elevation – The numbers in this column are the elevation in feet above mean sea level (USGS Datum) of the ground surface at the well. Elevations are usually taken from topographic maps and the accuracy is controlled by topographic standards.

Date – The date shown in the column is the date when the depth measurement given in the next column was made.

Ground Surface to Water Surface – This is the measured depth in feet from the ground surface to the water surface in the well; certain of the depth measurements in the column may be followed by a number in parentheses to indicate a questionable measurement. The code applicable to these "questionable measurements" is as follows:

(1) Pumping
(2) Nearby pump operating
(3) Casing leaking or wet
(4) Pumped recently
(5) Air or pressure gage measurement
(6) Other
(7) Recharge operation at or near well
(8) Oil in casing
(9) Caved or deepened

When a measurement was attempted, but could not be obtained, then only a number in parentheses is shown in the column. The code applicable to these "no measurements" is as follows:

(1) Pumping
(2) Pump house locked
(3) Tape hung up
(4) Cannot get tape in casing
(5) Unable to locate well
(6) Well has been destroyed
(7) Special
(8) Casing leaking or wet
(9) Temporarily inaccessible
(0) Measurements discontinued

The words *flow* and *dry* are shown in this column to indicate a flowing or dry well, respectively. A minus preceding the number in this column indicates that the static water level in the well is this distance in feet above the ground surface.

Water Surface Elevation – This is the elevation in feet above mean sea level (USGS Datum) of the water surface in the well. It was derived by subtraction of the depth measurement from the ground surface elevation.

Agency Supplying Data – Each number in this column is the code number for the agency supplying data for that measurement. The agencies supplying data for this report and the code numbers assigned to them are as follows:

Agency code	Agency name
005	United States Bureau of Reclamation
010	United States Geological Survey
015	United States International Boundary and Water Commission
050	State Department of Water Resources
051	Patton State Hospital

*Abbreviation of agencies conducting spreading operations are presented in alphabetical order:
CAWC, California-American Water Company; CPWD, City of Pomona Water Department; CSMWD, City of Sierra Madre Water Department;
EWC, Etiwanda Water Company; FUWC, Fontana Union Water Company; LACFCD, Los Angeles County Flood Control District;
LADW&P, Los Angeles Department of Water and Power; OCFCD, Orange County Flood Control District; OCWD, Orange County Water District;
SAVIC, Santa Ana Valley Irrigation Company; SAWC, San Antonio Water Company; SGRSC, San Gabriel River Spreading Corporation;
TWC, Temescal Water Company
UWCD, United Water Conservation District

**Bimonthly amounts.
